Packet Sniffing

Aim

Write a code using RAW sockets to implement packet sniffing.

code :-

```
from scapy.all import sniff
from scapy.layers.inet import IP, TCP, UDP, ICMP

def packet_callback(packet):
    if IP in packet[IP]
        ip_layer = packet[IP]
        protocol = ip_layer.proto
        src_ip = ip_layer.src
        dst_ip = ip_layer.dst
    Protocol_name = " "
    if protocol == 1:
        Protocol_name = 'ICMP'
    elif protocol == 6:
        Protocol_name = 'TCP'
    elif protocol == 17:
        Protocol_name = 'UDP'
    else:
        Protocol_name = 'unknown protocol'
    Print(f"Protocol: {Protocol_name}")
    Print(f"Source IP: {src_ip}")
    Print(f"Destination IP: {dst_ip}")
    Print("-"*50)
```

```
def main()
    sniff(iface='wifi', prn=packet_callback,
        filter='ip', store=0)
if __name__=="__main__":
    main()
```

Result

Thus the program is successfully executed and output is verified.
